Remontage de mouvements

WINDING EQUIPMENT FOR AUTOMATIC WATCH MOVEMENTS

Remontage de mouvements

Winding equipment for watch movements

Equipment

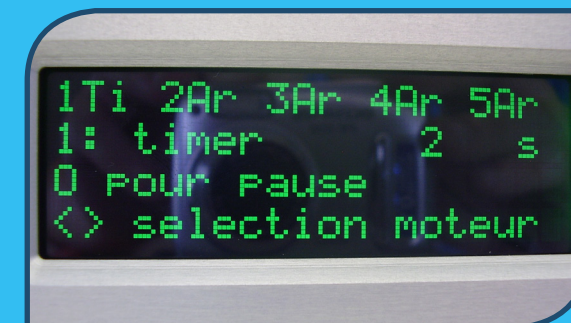

This device has 5 independent motorised rotary supports. It allows to put mechanism into movement. Hands driving leads mechanism to unload in accelerated time. Rotation direction, rotation speed, rotations number and pause time can be adjusted.

Adjustable position

The device can be placed on 4 different sides, so it fits to the different desired kinds of tests.

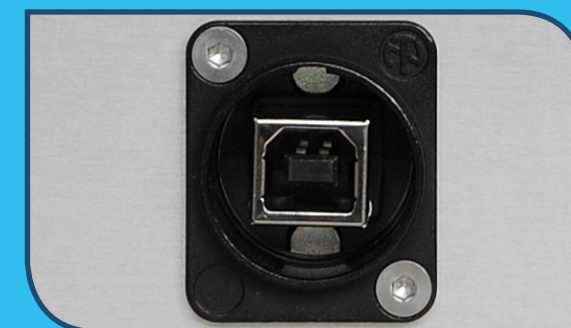

Control screen

The screen on this machine allows to drive the different supports independently. It is possible to start the cycle, to interrupt it (pause) or to stop it.

Programming

Cycles are programmed from a PC by mean of the USB port. The software enables to record cycles on the PC, but also to print the sequence for each support.

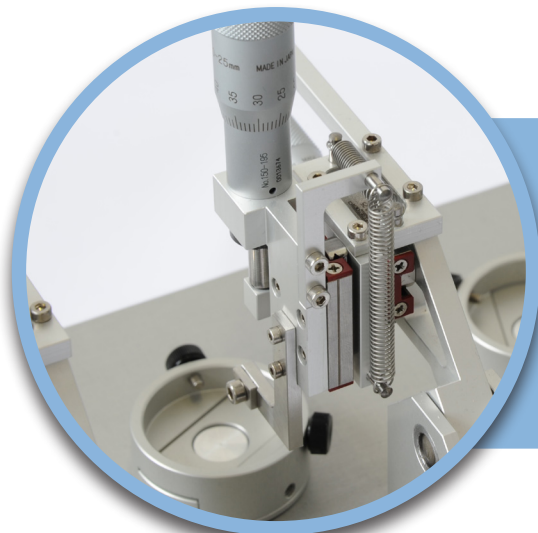

Sequence

A test sequence is made up of a certain number of cycles. All the parameters can be defined by the user.

Variants

- Version without hands driving
- Version with hands driving for accelerated unload

Technical data

Number of supports	5
Rotation speed	from 0,1 to 180 r.p.m.
Rotation direction	bidirectional
Interface	1 x USB 2.0
Connection	230 V - 60 W
Dimensions	500 x 170 x 200 (l x d x h)
Weight	9 kg
